## Forrest wastewater concept planning

Work is continuing to progress on a concept design for a centralised wastewater management solution for Forrest. Identifying potential sites for a water recycling facility near the township has been difficult due to limited suitable land available. As a result, we have broadened our search to within 6 km of Forrest, including in the Gerangamete area. We've been in contact with local landowners to discuss the project and land suitability.

Early assessments have shown that land in this area could benefit from the use of recycled water and could be suitable to install a water recycling facility.

Finding a suitable site will allow us to complete the concept design and business case, due to be presented to the Barwon Water Board for approval once finalised.

Barwon Water remains committed to delivering this project in line with the community's vision and to support the prosperity of the town.
